DO YOUR FIRST TOMATO BLOOMS FALL WITHOUT SETTING FRUIT?

Many gardeners have experienced this difficulty which retards harvesting of tomatoes as much as three weeks.

Science has discovered that certain chemicals when sprayed on the blossoms would fertilize them causing them to set fruit. Such fruit, it was found, would contain less seed and in some cases be seedless. Egg plants, peppers and some other fruits are similarly affected. These experiments were conducted by a most credible institution, The Boyce-Thompson Institute of Plant Research. Try this chemical called "**Seedless Set**" for an early crop of tomatoes. 8 oz. bottle (treats 100 plants) \$1.00; qt. (32 oz.) \$3.00; postpaid 300 miles.

PREVENTS DAMPING-OFF - INCREASES YIELD

when dusted on seeds whether sown in fields or in flats. It is a non-poisonous, non-metallic dust which adheres readily to the seed forming a protective and disinfectant coating against harmful fungi causing damping-off and other organisms of disease which might get on the seed, resulting in better stands and greater yields. It has an advantage in that the seed may be treated at any time; it does not deteriorate with age and will not spoil the inoculation of legumes. Recommended for all garden seeds except beet. Try it especially on Lima Beans.

The Full Pantry Shelf

35% LESS CANNED VEGETABLES will be available for civilian use in 1945.

"THIS WAR CAN'T BE WON WITHOUT FOOD. It is as essential as guns," says War Food Administrator Judge Marvin Jones.

Those two indisputable facts should be sufficient reason for making a **Victory Garden**.

20 Million Victory Gardens in urban, suburban and rural sections produced 40% of all fresh vegetables grown in the United States in 1944. Besides helping the food program, you helped **save** shipping space, transportation, packing materials and labor.

Yes, planting a **Victory Garden** is patriotic both from a point of view of producing food as well as contributing to the saving of critically short materials and services.

20 MILLION VICTORY GARDENS is the goal set for 1945. The National Victory Garden Conference is counting on you again this year and if possible would like you to increase your plantings (do not forget to include some flower and ornamental plantings, too). They suggest you canvass your neighbors for new recruits to this all-out drive for food and victory.

We will continue to need tremendous quantities of food long after the war is over. So whether the war is over this year or next, one thing is certain—if we plant a **Victory Garden**, only then will we be sure of **A FULL PANTRY SHELF**.

Beautiful Lawns by Burnett Seedsmen

Formula No. 1 Lawn Grass Seed Mixture

It requires no more effort to sow the best grass seed mixture than it does a poorer grade, and it is less expensive when you consider its permanence which eliminates constant resowing. Formula No. 1, the **balanced mixture**, is composed of several of the choicest, recleaned dwarf and spreading grasses, each serving its specific purpose; the **quick growing** biennials which act as nurse crops to the **slower germinating** more permanent sorts which reach maximum maturity only after 2 or 3 years; the **spreading varieties** which fill in bare spots left vacant by the disappearing (after a few seasons) biennial grasses, and the natural **drought resistant** varieties. Formula No. 1 will produce a fine, deep velvety green, close turf which will lend a tone of intimacy to the palatial mansion or the humblest dwelling. It completes the landscape. Asters a (Wilt Resistant)

Need no introduction, but what is **Wilt Resistant Aster Seed**? It's a strain of seed produced from plants that were grown in heavily wilt-infested soil. It is reasonable to infer that if a strain was able to grow to full maturity and bear seed, it's genera or offspring must likewise be immune to wilt. Don't take chances, sow **Wilt Resistant Strain Asters** wherever possible.

Asters prefer rich sandy or loamy soil. Use well rotted manure or phosphate fertilizer. Cultivate and water regularly. Sow seeds six weeks before intended transplanting; water immediately after. Set tall varieties 18 in. apart, medium sorts 12 in. apart, dwarf types 9 in. apart.

Delphinium Seeds

Vetterle & Reinelt Pacific Hybrids

Chrysanthemum September Jewels

VETTERLE & REINELT'S (PACIFIC HYBRIDS) were awarded a gold medal at the 1939 and 1940 Oakland Spring Garden Shows, the annual flower events of the Pacific Coast. Could not compete in 1941.

V. & R. Delphiniums are classed with the top-ranking strains of the world. Praises of them are just as numerous and sincere from the professionals as from the amateurs.

HAND CROSS-POLLINATED seed is V. & R.'s best strain. This stock possesses the most desirable characteristics, qualities which are intensified to the greatest degree possible. The percentage of **show specimens** from this hand **cross pollinated** seed is the highest obtainable.

SELF-POLLINATED seed is collected from outstanding plants and will produce plants fairly uniform in color and type. For exhibition plants, however, sow the hand **cross pollinated** seed.

Blue Bird Series (new 1941). At last a true blue Delphinium; clearest medium blue with white bee. Besides coming true to color they carry well rounded $2\frac{1}{2}$ in. flowers; long graceful spikes. A new standard in blues of today.

BLACK KNIGHT (new '39). The darkest of them all; the heavy, velvety texture lends a tone vividness and luminosity never seen before; $2\frac{1}{2}$ in. florets; long, well formed spike.

BLUEJAY. Strikingly clear true blue, medium to dark, intense and alive with dark contrasting bee.

GALAHAD SERIES (new 1939). A giant race—3 in. individual white flowers of heavy, glistening texture, well spaced on strong, thin cylindrical spikes; fairly mildew resistant.

CAMELIARD SERIES (new 1940). Pure lavender self with white bee. Perfectly formed flowers; well balanced spike.

King Arthur Series. Rich royal purple with a velvety texture and large white bee. One of the most brilliant.

ROUND TABLE SERIES (new 1940, July delivery). New color developments from over 300 crosses possessing immense size spikes.

Any above **CROSS-POLLINATED** seed—each: Pkt. \$2.50, Collection 5 vars. \$10.00. $\frac{1}{2}$ pkt. \$1.75, Collection 5 vars. \$5.00.

Self-Pollinated seed—Any above, each: Pkt. \$1.25, Collection 5 vars. \$4.00. $\frac{1}{2}$ pkt. 65c, Collection 5 vars. \$2.75.

ALL-AMERICA SELECTIONS

1945

ALL the "All America Selections" introduced since 1933 are grouped here. They represent the newest developments in flowers, the latest fashions. In making these your choice, you are assured of having selected the best for your garden. Then again, they make ideal Gifts, the values of which may be easily regulated to suit your limit.

HERE IS HOW THE "ALL AMERICA SELECTIONS" ARE MADE

"ALL AMERICA SELECTIONS" are the choice of the Nation's leading horticultural judges, as being the most worthy new varieties introduced each year. They include species from around the World, imported and planted in twelve different localities in the United States, from whence they are judged. Their recommendations are authentic and dependable; your safeguard against ambiguous creations or claims.

Novelties within our garden walls intrigue us, for they tax our keenest anxiety in expectation of unrevealed new beauties—and we pride ourselves of keeping in with the modern touch.

SENSATIONAL NEW LETTUCE

It Heads in Hot Weather

Introduced in 1944 as a heat resistant variety and for which it was awarded a bronze medal, "Great Lakes" has lived up to all claims made for it.

Froven—From Cuba, a customer writes, "With Great Lakes lettuce seeds, I was able to obtain the first head lettuce after trying with every type and kind of seed advertised."—Oct. 12, 1944.

Great Lakes (B.M., A.A.S., 1944). Imperial type. The best Summer lettuce to date, being remarkably resistant to heat drought and tip-burn. Being slow-in-going-to-seed, it insures heads, even in hot weather and by the amateur, too. Its crispy, thick leaves fold well over solid heads, which when unravelled make desirable salad pieces; and most delicious.

YOU GIVE (2) GIFTS, WHEN YOU GIVE (1) YOU GIVE TO BIRDS, TOO, WHEN YOU GIVE FRIENDS BIRD FEEDERS AS GIFTS

No more appropriate or more enjoyable gift can one receive, than one which will help feed our wild birds, especially in Winter. At this time of the year when the ground is hard and covered with snow, very little natural food is available. But for the habit of birds eating insects, life on this planet would be impossible. Therefore, what little food we give to birds now, is but a pittance of compensation in comparison to the work they render.

Help feed them this Winter by giving gifts of Bird Feeders. Next Spring they will sing songs of thanks.

PARADISE (New '41) Illustrated

Here is an asparagus that actually comes into bearing **ONE YEAR EARLIER** than any other variety. An exceptionally strong, vigorous producer. Some say it produces twice the crop of ordinary asparagus. The stalks are like Martha Washington in appearance, large and green. Just imagine, only 6 to 8 stalks needed to make a pound. Its flavor is unusually mild and liked by all. Paradise is rust-resistant. Seed sown in Spring will bear asparagus for picking 2 years later. One year old Paradise roots, set out this Spring, will produce next year, asparagus as large and stalky as ordinary two- and three-year-old roots.

Fifty Day Sprouting Broccoli

Broccoli

Easier to grow than Cauliflower.

No other table green has captured the appetites of a Nation more than Broccoli, and why not? Its delicious fine flavor is appetizingly pleasing even to children, yet rich in iron; more easily digested and is of easier culture. Set plants 18 in. apart in rows and 24 in. between; when the center flowers form, cut with about 7 in. of stem; this will be followed later by several smaller heads. No fuss in tying up, like in cauliflower.

Fifty Day Sprouting Calabrese

Just think of it—you can pick "Fifty Day Sprouting Broccoli" in 40 to 50 days after transplanting, in certain localities; 50 to 60 in others. It is unquestionably the earliest in cultivation, yet may be used for late sowing (up to July). The heads are large, deep green, the texture extra fine and tender, the taste superb. It is a sprouting type, producing many lateral heads after the center head is cut; being a great heat resister, it will not burst into flower. Seeds of this superlative variety were imported direct from the grower in Italy.

Clematis and Other Climbing Plants and Vines

Only in recent years have American gardeners been able to enjoy the rare beauty of Clematis hybrids. These European garden treasures are notable for their spectacular flowers of outstanding color and form. They lend dignity and charm to a garden, growing on trellises, arbors, pergolas, old tree stumps and walls; varying from 6 to 12 ft. in height, they flaunt their beauty and may be enjoyed from many parts of the garden. Most useful from a decorative standpoint, lasting well when cut and lending themselves to unique arrangements. **CULTURAL DIRECTIONS:** Clematis prefer partial shade. BURNETT'S Formula No. 1 LAWN GRASS SEED

What makes this peaceful landscape so beautifully balanced? What makes it so restful to the eye?—to the mind? That soothing mass of green color. The green of the leaves. The green of the lawn. For it is said that green, the color of sophistication, leads to restraint. It is grave, dignified. It arouses in us an emotion of tranquility. You, too, can lend a touch of placidness to your

own home-grounds by seeing that your lawn is well made. See that it is seeded with vigorous grass seeds, the proper sorts to produce that deep velvety green lawn. May we suggest BURNETT-SEEDSMEN'S FORMULA NO. 1, the balanced lawn grass seed mixture? FORMULA NO. 1 is sure to produce that desired green lawn, just the tone to complete the landscape. And at nominal cost, too.

FORMULA No. 1 sells for: Lb. 75c; 5 lbs. \$3.50; 10 lbs. \$6.75; 25 lbs. \$16.00; 100 lbs. \$62.00, prepaid
